# Elmich VGM® Green Wall

Elmich VGM® Green Wall offers architects and developers a complete and durable solution for turning heat-absorbing and often dull and monotonous walls into cool and attractive living green walls that assimilate easily into a natural or garden environment. It protects a building from the harmful effects of sunlight and UV exposure and provides an insulating barrier against noise and extreme temperatures.

## What is Elmich VGM® Green Wall

Elmich VGM® Green Wall is a robust architectural living wall system comprising VGM® planting boxes each with a planting media bag, planting media, support brackets with covers, anti-lift arms and automated drip irrigation-cum-fertilization (fertigation) and anchoring pilaster systems.

Installation of VGM®

Completed Installation

Mature Elmich VGM® Green Wall

Indoor and Outdoor Green Walls

## DISTINCTIVE FEATURES

### All-Around Planting

VGM® design minimizes module warping and media bag bulging. Optional cut-away side openings enable all-around planting when required. Top panel is easily opened and closed.

### Pre-Planting

VGMs pre-planted and nurtured off-site allow the plants to take root and be orientated to a vertical environment. This enables a mature living wall to be established soon after installation.

### Securing System

Each VGM® is secured by 4 steel brackets and anchored to steel pilasters. Pilasters require minimal penetrations of the supporting wall and enables easy mounting and dismounting of the VGMs.

### Fertigation System

Automated fertigation system with multiple arrow drippers inserted into the planting medium deliver water and fertilizers directly at constant pressure to the plant roots.

### Anti-Lift Arm

The steel brackets and pilasters are engineered to a high safety standard and are especially suited on high walls. Locking arms prevent the VGM® lifting off the pilasters.

### Planting Media

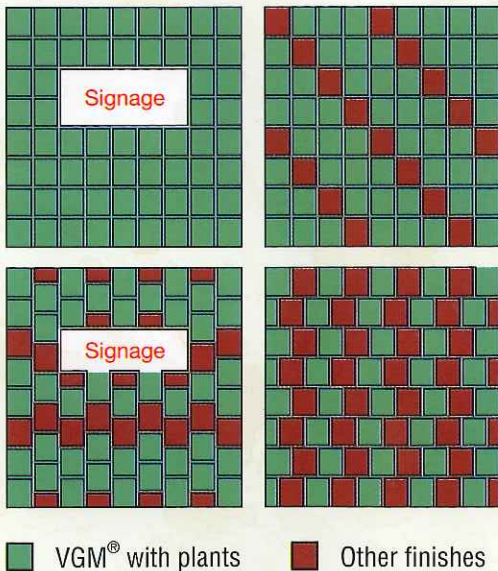

Predominantly lightweight inorganic planting medium resists slumping. Large media volume and proprietary additives allow use of a wide variety of plants and ensures its sustainability.

## Advantages

- Lightweight and modular
- Robust and easy to assemble
- Easy mounting, dismounting and re-mounting of modules
- Easy plant replacement or design change and maintenance
- Wider plant selection with variable media depth and volume
- 40mm gap between modules and the wall
- Space for concealed drip irrigation facilities
- Efficient and cost effective compared to other systems
- Modules pre-planted in nursery before installation
- Module arrangement and design can be predetermined off-site
- Modules are made from 100% recycled plastics
- Supports Green Building Certification

Modular design allows for different green wall layouts with other finishes such as timber, stone and signage. E.g

## Specifications

### VGM

#### Size

- actual (mm) 560 (H) x 480 (W) x 150 (D)
- nominal (mm) 600 (H) x 500 (W) x 150 (D)

#### Internal volume (l)

~26

#### Weight

- with media & plants (kg) ~30

#### Material

Polypropylene

#### Colour

Black

### Mounting System

#### Material

Stainless Steel 304/316

#### Support Brackets

4

#### Pilaster length (m)

0.6, 1.2 and 2.4

#### Max. load (kg/m<sup>2</sup>)

up to 1000

Orchard Central Mall Roof Garden, Singapore (Winner of Skyrise Greenery Award 2009)
