

Eye Wellness Set

Improve:

Have a significant effect to alleviate the following problems on our eyes due to lack of sleep, prolonged use of computers, myopia, cervical fatigue, dark eye circles, eye bags, wrinkles, drooping of the corner of the eye, eye fatigue, insomnia and neurasthenia. Also helps to alleviate facial skin pressure.

眼部套盒

改善:

睡眠不足、长时间对着电脑、近视、颈椎疲劳、黑眼圈、眼袋、皱纹、眼角下垂、眼睛疲劳、减轻面部皮肤压力、失眠、神经衰弱有明显的功效。

按摩精油成份：姜、甜杏仁

刮痧精油成分：黑胡椒、葡萄柚、丝柏、快乐鼠尾草精油

眼部矿物泥精华成份：钙、镁、铜、锌、铝、钠、铁。。。。。

艾条成份：艾碳粉95%、粘合剂5%

刮痧板：砭石

Eye Function

The formation of vision

For the human eye to see an object involves a set of complicated procedures – starting from the eye which transmits light and images to the brain which identifies the image. Firstly, the external light (image) reaches the retina through the cornea, pupil, lens and vitreous transparent structure. The retina feels the light and generates a pulse (image) via the retinal nerve fibre along the optic nerve and optic chiasm to reach the occipital lobe of the brain. The visual cortex in the occipital lobe of the brain identifies the incoming signal from the eye to enable us to “see” the image of the object.

眼睛的功能

視力的形成

人類的眼睛能“看”到物體，是需要經過許多複雜程序的。“看”是在大腦完成的，眼睛只提供光線及物體影像的傳輸。首先，外來的光線(影像)經過眼角膜、瞳孔、水晶體、玻璃體等透明的構造到達視網膜。視網膜為眼球裡面最內層的神經膜層，其感受光線並產生脈衝(影像)後，經由視網膜神經纖維，沿視神經、視交叉、視放射再進入大腦枕葉，而大腦枕葉的“視皮質”則可辨識由眼球傳入的訊息，我們才能“看”出物體的影像。
